

# Automated Kiosk Payment Solutions

HIGHPOINT PAYMENT KIOSK

Highpoint Systems offers solutions to increase customer bill payments with integrated value-added solutions.

The bill payment kiosk provides a convenient way for customers to pay with credit card or check in a secure and timely manner. Customers can access the simple touch screen interface at the kiosk and swipe major credit cards for authorization or process checks.

The kiosk server application supplies connectivity between multiple kiosks and the legacy accounting solution. Additionally, the kiosk is developed from the ground up to incorporate Microsoft® SQL 2005 with advanced security.

Compatibility with ICVerify® allows for selection of most merchant accounts. In addition, the reporting from within the kiosk provides for reconciliation between the kiosk and the legacy accounting system.

Internet based transactions are also available using the automated kiosk software within a SQL database.

## BENEFITS AND VALUE:

- Software compatible with commercially available kiosk hardware (Microsoft Windows PC based)
- Can be connected locally to the network or offsite using the Internet for connectivity
- Validates the user by account number and optionally by a second identifier (e.g., phone number)
- Displays account summary on kiosk screen
- Accepts payment by Credit card or check
- Provides receipt for the transaction (optional)
- Provides client customizable opening and closing splash screens, and client supplied graphics on the main screens
- Allows up to six languages
- Interfaces to legacy accounting systems to accept customer balance data and provide payment transaction detail in a batch transaction.
- Barcode scanning available
- Internet payment acceptance available
- Allows customer inquiry on previous payments and balance due.
- Allows for partial payment

***EFFICIENCY THROUGH AUTOMATION***
